

OPTIONS AFTER DIGITIZATION

- After analog signal digitization, there are two things that can be done to the digitized signal that is saved in RAM.
- Signal can either be plotted on scope to see exactly what happens at each digitization ~~point~~ ^{or} the analog signal.
- Signal can be transferred to computer with the use of a Serial port.
- We do both, so that we can see digitized signal on the scope and compare it to what has been dumped in the computer, in terms of period, digitization channels, and size.
